

LEAN INTELLIGENCE

Sovereign AI that stays home.

A private AI that has read everything you own — fully local, fully contained, never exposed.

 **AI that understands**

 **100% private**

 **Built for scale**

THE PROBLEM

Your knowledge is trapped — and the tools to use it **want your whole life uploaded.**

Scattered & unusable

Decades of files, a million emails, every photo and recording — spread across drives where you can't actually search or ask anything.

Cloud-only AI

The assistants that could read it all force you to upload your entire digital life to someone else's servers.

Rented forever

Per-seat fees, token bills, vendor lock-in — you pay endlessly and never own the result.

Privacy gone

Your most sensitive data sits on infrastructure you don't control, scanned by parties you didn't choose.

THE SOLUTION

One private mind for **everything you've ever saved.**

Lean Intelligence ingests a lifetime of files, email, photos and recordings and makes them instantly searchable and conversational — with every answer cited — while every byte and every model stays on hardware you control.

Ask anything

Cited, conversational answers

Hybrid search

Meaning + keywords + re-rank

Email intelligence

1M+ messages, deduped

See your photos

1.7M images by content

Hear everything

Audio/video transcribed

Ask the data

Natural language → SQL

Read aloud

Spoken in a cloned voice

Guardrails

Grounded & on-policy

HOW IT WORKS

From your drives to a cited answer — **without the cloud.**

Every model runs on local silicon — **RTX PRO 6000 Blackwell, DGX Spark and Apple Silicon.** No API keys. No data ever leaves the building.

BY THE NUMBERS

Proven at **real-world scale.**

WHY IT MATTERS

Privacy isn't a setting. **It's the whole point.**

 Every other AI assistant asks you to trade privacy for capability. Lean Intelligence is the one that refuses to.

✓ No cloud, ever

Data and models stay on your hardware. Nothing is uploaded, cached off-site, or scanned by a third party.

✓ No subscription

Own it once. No per-seat fees, no token meters, no surprise overages — scale is your disks.

✓ Air-gap ready

Runs fully offline. Pull the network cable and it still answers — true sovereignty.

VS. CLOUD AI SEARCH

Same power. None of the exposure.

LEAN INTELLIGENCE

CLOUD AI (Glean / Copilot / ChatGPT Ent.)

Where your data lives	✓ On your hardware	Vendor cloud
Data leaves your network	✓ Never	Required
Cost model	✓ Own it once	\$ / seat / month
Personal archives (email, photos, VMs)	✓ First-class	Not supported
Model & vendor lock-in	✓ You own the stack	Locked in
Works offline / air-gapped	✓ Yes	No <small>Private RAG · pgvector · local model mesh</small>

Total recall. Total privacy.

The same total-recall intelligence as the cloud giants — fully contained, answerable only to you.

 **Nothing leaves the building.**

LEAN INTELLIGENCE · sovereign AI for everything you own
