

YOUR KNOWLEDGE, WITH A MIND OF ITS OWN

# A private AI that has read everything you own.

Lean Intelligence turns decades of files, email, photos and recordings into one searchable, conversational memory — running entirely on your own hardware. Ask it anything. Nothing ever leaves the building.

### AI that understands

Chat with citations, semantic + image + email search, ask-the-data answers, read-aloud replies.

### 100% private

No cloud, no subscriptions, no data exfiltration. Air-gap-ready. You own the models and the data.

### Built for scale

Millions of documents and emails, billions of words — indexed and answered in seconds.

## What it does

### Ask anything

Conversational answers grounded in your files, every claim cited to its source.

### Hybrid search

Meaning + keywords + neural re-ranking find the right passage, not just matching words.

### Email intelligence

A million+ messages across PST/MBOX/Outlook — deduped, threaded, searchable.

### See your photos

"Find pictures like this one." 1.7M images understood by content, not filenames.

### Hear everything

Audio & video auto-transcribed, so spoken words are searchable too.

### Ask the data

"How many invoices from 2021?" → exact counts via natural-language-to-SQL.

## How it works

### Your sources

Files · email · photos · audio · VMs

### Ingest

Extract · OCR · transcribe · embed

### Vector store

Postgres + pgvector · HNSW

### Retrieve

Hybrid search + re-rank

### Answer

Local LLM · cited · spoken

**Nothing leaves the building.** Every model runs on local silicon — RTX PRO 6000 Blackwell, DGX Spark and Apple Silicon. No API keys, no per-seat fees, no third party ever sees your data.
